PPT : Dr. R. Y. Bakale

3. Variation of Impedance

For a series R-L-C circuit, the impedance is given by

$$Z = \sqrt{R^2 + (X_L - X_C)^2}$$

where $X_L = \omega L$ and $X_C = \frac{1}{\omega C}$

At resonance, $X_L = X_C$, so $Z = R$

At low frequencies, $X_C > X_L$, so $Z > R$

At high frequencies, $X_L > X_C$, so $Z > R$

4. Power in AC Circuit

The average power in an AC circuit is given by

$$P = I_{rms} V_{rms} \cos \phi$$

where ϕ is the phase angle between current and voltage.

At resonance, $\phi = 0$, so $P = I_{rms} V_{rms}$

At low frequencies, $\phi > 0$, so $P < I_{rms} V_{rms}$

At high frequencies, $\phi < 0$, so $P < I_{rms} V_{rms}$

5. Power Factor

The power factor in an AC circuit is given by

$$\cos \phi = \frac{R}{Z}$$

where ϕ is the phase angle between current and voltage.

At resonance, $\cos \phi = 1$

At low frequencies, $\cos \phi < 1$

At high frequencies, $\cos \phi < 1$

6. Resonance and Power Resonance

The resonance frequency of an R-L-C circuit is given by

$$\omega_0 = \frac{1}{\sqrt{LC}}$$

At resonance, the impedance is minimum and the current is maximum.

The average power in an AC circuit is maximum at resonance.

7. Quality Factor

The quality factor of an R-L-C circuit is given by

$$Q = \frac{\omega_0 L}{R} = \frac{1}{\omega_0 R C}$$

where ω_0 is the resonance frequency.

A high quality factor indicates a sharp resonance peak.

8. An Introduction of Impedance and Admittance by using vector

The impedance of an R-L-C circuit can be represented by a vector diagram.

The admittance of an R-L-C circuit can be represented by a vector diagram.

The impedance and admittance are reciprocals of each other.

9. Impedance of a parallel R-L-C circuit

The impedance of a parallel R-L-C circuit is given by

$$Z = \frac{1}{\frac{1}{R} + j\omega C - \frac{j}{\omega L}}$$

where j is the imaginary unit.

At resonance, the impedance is maximum and the current is minimum.

10. Power in a parallel R-L-C circuit

The average power in a parallel R-L-C circuit is given by

$$P = I_{rms}^2 R$$

where I_{rms} is the rms current through the resistor.

The average power is independent of the frequency.

11. Power Factor in a parallel R-L-C circuit

The power factor in a parallel R-L-C circuit is given by

$$\cos \phi = \frac{R}{Z}$$

where ϕ is the phase angle between current and voltage.

At resonance, $\cos \phi = 1$

Thank You

These particles obey Pauli's exclusion principle and are called fermions. Ex. REPORT ON ONE DAY REGIONAL LEVEL WORKSHOP ON IPR AWARENESS

(Saturday 8th July 2023)

Workshop Overview:

Department of Chemistry in collaboration with IQAC and Technominds IP solution organized one-day 'Regional level workshop on IPR awareness' Under National Intellectual Property Awareness Mission.

on the dated 8th July 2023 for faculty members. The resource person for this workshop was Mr. Rushikesh Lavhale, who has more than 5-year experience in the field of IPR and project management. He is a patent agent (IN/PA 4889) and director of Technominds IP solution. He has eight patents in his name and awards from VIT University Vellore, IIT Mumbai, VNIT Nagpur, VIT College Pune, Parul University Gujrat, IIT Guwahati,

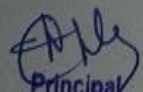

Objective:

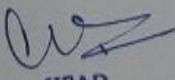

The objective of the workshop was to build IPR culture. The silent objectives were to introduce the method of protecting the idea, design or product of inventor. The objective was also to educate the participants about various types of patents and procedure to file the patent.

Workshop Details:

The workshop commenced at 12:00 pm in the Dr. Panjabrao Deshmukh Auditorium. The co-ordinator of the workshop Dr. Atul K. Wanjari, started the session with an overview of Intellectual Property Right (IPR). He explained various elements of IPR like Trademark, Copyright, Patents etc. The resource person Mr. Rushikesh Lavhale explained various steps involved in filling patent like prior art search, patent drafting, patent examination, first patent review etc. He also asks to all the researchers and inventors to focus more on prior art search, as it increases chances of your patent get approved. The innovation must improve the performance of existing product or make human life simpler. He also inspired participants for having their own patent. He informed participants about various agencies who assists the inventor in patent filling. He added that government of India have made the process so easy that one can file the patent and track the status of filed patent online. He concluded the session with his statement that there is no reason for not filling the patent.

The workshop was a grand success under the enlightenment of Principal of the college Dr. G.N. Chaudhari, Inaugurator of the workshop Dr. N.J. Meshram, Principal, Shri. R.R. Lahoti Science college, Morshi, Dr. S.V. Satupte IQAC Co-ordinator and the 70 participants.

National Consumer Right Day:

Report on National Consumer Rights Day

2022-23

National Consumer Rights Day is celebrated on 24th December every year, the formation of this day was held in 1986 under Consumer Protection Act. This day was made to protect consumer's rights and to make people aware about it. The main objective of this day is to protect the rights of consumers.

As consumers, we all want to be able to get the best products and services for our money. Unfortunately, sometimes companies don't always live up to these expectations. That is why, in India, an annual event is celebrated on December 24th every year: National Consumer Rights Day. It also provides an opportunity for consumers to demand better customer service and more transparency from companies.

Faculty of Commerce & Management organized, 'National Consumer Rights Day' on 24th December, 2022. The chief guest Prof. Dr. Shyam Jadhav, during his speech told that every year, a theme is allocated to the celebrations and this year the theme is "Fair Digital Finance." Each year, a unique theme is decided for Consumer Rights Day to spread awareness about consumer rights and responsibilities. Consumers must be mindful of the safety and quality of products and services before purchasing them. They should not trust the seller blindly and must get the information on the price, quality, standard, etc., of the product.

Dr. U. E. Chaudhari addressed all the students. Mrs. Madhuri Umekar arranged this program and vote of thanks. More than 60 students, staff members and faculty members participated in this program. It was a very motivational and informative session for the students.

A Report on

“In house Fabrication of Experimental Kits 2022-23”

This is the part of one of the Best Practice of Department of Physics. Students of B.Sc. Physics are inspired and motivated to learn and develop the experimental kits on their own. There is large number of experimental kits available in the market which cost a lot to the college and their purchase is difficult most of the time. Hence physics students are encouraged to develop kits in the department itself. All the raw materials are made available to the students group. Students are demonstrated the know-how and fabrication of the kits. Students follow the instructions and prepare the kits on their own.

For the session 2022-23, nine experimental kits have been prepared by B.Sc. I, B.Sc. II and B.Sc. III year students and have saved approximately Rupees 21980/-. The details of the experimental kits fabricated by the students are as follows:

Sr. No.	Session	Name of Experimental kit fabricated in lab	Expenditure incurred in Rs. (Approx.)	Market Price in Rs. (Approx.)	Quantity prepared	Savings Per Item in Rs. (Approx.)	Total Savings in Rs. (Approx.)

Academic Activity National Mathematics Day: 13th March - 2023

Introduction

- We have studied group as a non-empty set with **one binary** operation.
- There is another important algebraic structure called *ring*, which is equipped with **two binary operations**.
- The concept of ring has its origin in the properties of integers as regard to their addition and multiplication.

An algebraic system $(R, +, \bullet)$ consisting of a nonempty set R with two binary operations '+' and ' \bullet ' which we call addition and multiplication respectively, is said to be (ring) an *associative ring* if the following axioms are satisfied:

- **R1** $(R, +)$ is an abelian group
 - R_{11} : Closure property
 - R_{12} : Associative property
 - R_{13} : Existence of identity
 - R_{14} : Existence of inverse
 - R_{15} : Commutative property
- **R2** (R, \bullet) is semi group
 - R_{21} : Closure property
 - R_{22} : Associative property
- **R3** Multiplication is distributive over addition i.e. for all $a, b, c \in R$
 - R_{31} : Left distributive law : $a \cdot (b + c) = ab + ac$
 - R_{32} : Right distributive law : $(b + c) \cdot a = ba + ca$

Contents

- Introduction of ring and Definition
- Basic properties of ring
- Subring
- Integral Domain
- Field

Zero element. The identity of the additive abelian group R is called zero element of R . This 0 is unique and is denoted by 0. This 0 is just a symbol and may not be an integer zero.

Inverse element. The additive inverse or negation of $a \in R$ is denoted by $-a$.

Commutative ring. A ring R is called a commutative ring if $a \cdot b = b \cdot a \forall a, b \in R$.

Ring with unity. Let R be a ring. If there exists an element $1 \in R$ such that $a \cdot 1 = 1 \cdot a = a \forall a \in R$. Then R is called a ring with unity or with unit element. Thus a multiplicative identity in a ring is unity.

Ring with zero divisor: A ring R is said to be ring with zero divisor if there exists non zero elements $a, b \in R$ such that $a \cdot b = 0 \Leftrightarrow$ neither $a = 0$ nor $b = 0$.

Ring without zero divisor: A ring R is said to be ring with zero divisor if there exists non zero elements $a, b \in R$ such that $a \cdot b = 0 \Leftrightarrow$ either $a = 0$ or $b = 0$.

- Example:**
1. Set of integers is a ring $(Z, +, \cdot)$
 2. Set of even integers is a ring $(Z, +, \cdot)$
 3. Ring of rational no. $(Q, +, \cdot)$
 4. Ring of real no. $(R, +, \cdot)$
 5. Ring of complex no. $(C, +, \cdot)$
 6. The set of natural no. does not a ring.
 7. $(Z, +, \cdot)$, $(Q, +, \cdot)$, $(R, +, \cdot)$, $(C, +, \cdot)$ are commutative ring.
 8. $(Z, +, \cdot)$, $(Q, +, \cdot)$, $(R, +, \cdot)$, $(C, +, \cdot)$ are also ring of unity for 1.

Example . If R is a ring with unity, then the unity is unique.

Example: The set Z of all integers is a ring with respect to addition and multiplication of integers as the two ring compositions.

Basic properties of a ring

Some of the basic properties of a ring are enumerated in the following theorem.

- Theorem:** If R is a ring with zero element 0, then for all $a, b, c \in R$
1. $a \cdot 0 = 0 \cdot a = 0$
 2. $a(-b) = (-a)b = -(ab)$
 3. $(-a)(-b) = ab$
 4. $-(a + b) = (-a) + (-b)$
 5. $a(b - c) = ab - ac$, $(a - b)c = ac - bc$
 6. $(-1)a = -a$
 7. $(-1)(-1) = 1$

Subrings

Any nonempty subset S of a ring $(R, +, \bullet)$ is called a **sub ring**, $(S, +, \bullet)$ is ring under the binary composition of R .

Improper subring: Each ring R has trivial $\{0\}$ and R . These are called the improper subring of R .

Proper subring: Other sub rings are of R called non trivial or proper subrings.

- Examples: 1**
- $E = \{0, \pm 1, \pm 2, \pm 3, \pm 4, \dots\}$, Z, Q, R, C are rings under usual addition and multiplication
- i) Z is a sub ring of each ring Q, R, C .
 - ii) E is a sub ring of each ring E, Q, R, C .
- Example:2**
- $Z \{0, 1, 2, 3, 4, 5, +6, \bullet 6\}$ is a ring under addition and multiplication modulo 6. It has two nontrivial subrings

Integral domain.

A ring is said to be an integral domain iff

- i. Is commutative.
- ii. Has unit element.
- iii. Is without zero divisor.

- Examples**
1. Ring of integers is an ID.
 2. Ring of numbers $(a + ib)$ is ID for all $a, b \in I$
 3. Ring of numbers $(a + b\sqrt{2})$ and numbers $(a + b\sqrt{3})$ are ID for all $a, b \in I$
 4. E, Z, R are integral domains with usual addition and multiplication.

An integral domain $(D, +, \bullet)$ is the set of together with two binary operations (+) and (\bullet) of addition and multiplication defined on set D if the following properties are satisfy

I: $(D, +)$ is an abelian group under addition.

An integral domain is a commutative ring with at least two elements having without zero divisors.

Division ring or skew field.

Theorem: Every field is an integral domain but converse is not true.

Proof: Let F be a field. Since field is commutative ring with unity.

We show that only F is without zero divisor.

Let $ab=0$ with $a \neq 0$. Let $a \neq 0 \Rightarrow a^{-1}$ exist.

Now $ab=0 \Rightarrow a^{-1}(ab) = a^{-1}0 \Rightarrow (a^{-1}a)b = 0 \Rightarrow 1.b = 0$

Similarly suppose that $b \neq 0 \Rightarrow b^{-1}$ exist.

Then $ab=0 \Rightarrow (ab)b^{-1} = 0.b^{-1} \Rightarrow a(bb^{-1}) = 0 \Rightarrow a.1 = 0$

$\therefore ab=0 \Rightarrow$ either $a=0$ or $b=0$

Hence F is an integral domain. Now we show that the converse is not true.

Consider $Z = \{0, \pm 1, \pm 2, \pm 3, \dots\}$.

Now $3(\neq 0)$ and has no multiplicative inverse in Z .

Hence Z is not a field

Field

• A ring is said to be field iff

- i. Is commutative.
- ii. Has unit element.
- iii. Is without zero divisor.
- iv. Every non zero element has multiplicative inverse.

An integral domain is called field if every non zero element has multiplicative inverse.

A ring R with having at least two elements is called a field iff

- i. Is commutative.
- ii. Has unit element.
- iii. Every non zero element has multiplicative inverse.

Division ring:

A ring R is a *division ring* or a *skew field* if

- R contain at least two elements.
- R has unity,
- Every non zero element has multiplicative inverse.

A Report on

"In house Fabrication of Experimental Kits 2022-23"

This is the part of one of the Best Practice of Department of Physics. Students of B.Sc. Physics are inspired and motivated to learn and develop the experimental kits on their own. There is large number of experimental kits available in the market which cost a lot to the college and their purchase is difficult most of the time. Hence physics students are encouraged to develop kits in the department itself. All the raw materials are made available to the students group. Students are demonstrated the know-how and fabrication of the kits. Students follow the instructions and prepare the kits on their own.

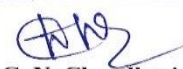

For the session 2022-23, nine experimental kits have been prepared by B.Sc. I, B.Sc. II and B.Sc. III year students and have saved approximately Rupees 21980/-. The details of the experimental kits fabricated by the students are as follows:

Sr. No.	Session	Name of Experimental kit fabricated in lab	Expenditure incurred in Rs. (Approx.)	Market Price in Rs. (Approx.)	Quantity prepared	Savings Per Item in Rs. (Approx.)	Total Savings in Rs. (Approx.)
1.	2022-23	Determination of Inductance of a coil by phasor diagram method	500/-	3420/-	02	2920/-	5840/-
2.		Determination of Capacitance by phasor diagram method	450/-	3420/-	02	2970/-	5940/-
3.		Verification of Kirchoff's Voltage Law	300/-	2420/-	03	2120/-	6360/-
4.		Study of frequency response of LCR Circuit	500/-	2420/-	02	1920/-	3840/-
Total Saving							Rs. 21980/-

Quiz 3: The 3rd quiz was sponsored by Dr. Y. S. Tamgadge.

The third quiz was launched by Dr. Y. S. Tamgadge in the month of March 2023. The quiz was as follows:

Mr. Aarish Khan of B.Sc. III Sem VI solved correctly after doing so many attempts and he was felicitated and awarded the prize money in the department.
