 Choudhari Science College, Warud

Context: Situated in rural area most of the students belong to agrarian background, To help and guide farming community ensuring sustainable fertility of land affected by excessive use of chemical fertilizers, To contribute a bit in keeping environment clean and tidy, To help beneficiaries by providing low cost organic manure as compared to expensive chemical fertilizers.

2016-2017

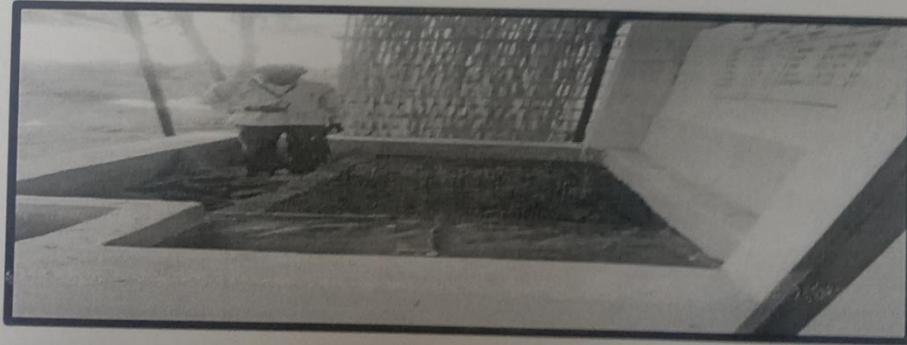

As earthworms are known as small industry producing organic manure, the institution has a novel project of producing vermicompost started from academic session 2016--17. having motive of helping students and their parents engaged in farming. The students are engaged from the beginning of the session. They are given technical and systematic knowledge regarding the project. The dire and urgent necessity of it is underlined. The many fold advantages like keeping air, water and soil clean, revival of vitality of soil, earning while learning etc. are made known to them. On Sundays and holidays they pick up garbage and disposable wastes from their catchment areas and contribute in the project.

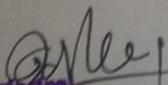

Department of Zoology regularly run vermicompost project under the head of solid waste management .

2017-2018

Vermicompost Project Project By the Department ..To contribute a bit in keeping environment clean and tidy.
